Hissing Microphone

Problem ID: hissingmicrophone**CPU Time limit:** 1 second**Memory limit:** 1024 MB**Author:** Zachary Friggstad**Source:** Rocky Mountain Regional Contest (RMRC) 2017**License:** 

A known problem with some microphones is the “hissing s”. That is, sometimes the sound of the letter s is particularly pronounced; it stands out from the rest of the word in an unpleasant way.

Of particular annoyance are words that contain the letter s twice in a row. Words like amiss, kiss, mississippi and even hiss itself.

Input

The input contains a single string on a single line. This string consists of only lowercase letters (no spaces) and has between 1 and 30 characters.

Output

Output a single line. If the input string contains two consecutive occurrences of the letter s, then output hiss. Otherwise, output no hiss.
